Name Alessandra

Think about something you know a lot about and write an informational piece that teaches people about your topic.

Today my topic is to stop killing animals and their homes because as much as you kill them or their homes the species is going to run out and the forest is not going to be there. Another reason is that there are going to be know more animals if we keep doing this. Also another reason is that we get oxygen from the trees, another reason is that what is there are animals inside the trees.

Another thing is that you are making energy going away because you are cutting down trees, another reason is that animals are dying from cancer because we litter in the forest but you should not do that because you are ruining the future for us and our children, because if you don't care why would they care about it.

Also another reason is that we would all need animals and plants because plants live in the forest when you are cutting down so however that plants they are going to be gone.
