

Dear President,

^{BIG problem}
We have a too many trees are being cut down

This is a problem because

trees recycle our carbon dioxide

and turn it back into oxygen.

One time I saw a tree cut

down, and that place had no

other trees so I couldn't

breathe as well as the place

(In front of my house) with more

trees. A solution is to make a
law that is, Do not cut down
trees unless there are
too many trees in one place!

Another solution is to make up
a law saying, Do not cut down trees!

Grow more trees in the environment.

Thank you very much! Love, Melody
